SUMMARY

Java Backend Developer with 2.3 years of experience building Spring Boot microservices and REST APIs for insurance platforms. Hands-on with Java, AWS, MongoDB, DynamoDB, and Redis across event-driven architectures, API performance optimization, production issue resolution, and CI/CD.

KEY ACHIEVEMENTS

- Optimized a high-volume data-retrieval API, reducing worst-case latency by **80% (15s to under 3s)** by eliminating full-collection scans through MongoDB nested-document indexing and running external API calls concurrently
- Resolved a production data mapping incident affecting **3000+ policies**, restoring end-to-end data integrity
- Reduced production exceptions by **50%** under a Kaizen initiative and cleared **600+ SonarQube issues** (60–70% per microservice), improving system reliability
- Earned the **Excellence Award (FY25–26)** from Axis Max Life Insurance and senior-leadership recognition for migrating **12 products** in a modernization program that nearly halved new-product delivery timelines

EXPERIENCE

Monocept (Client: Axis Max Life Insurance)

May 2024 – Present

Software Engineer

Hyderabad, India

Dolphin Project

- Integrating policy-reinstatement processing into **8 Spring Boot microservices** within Dolphin's event-driven 26-microservice platform, propagating new case parameters through **15 downstream callback APIs** with backward-compatible validation
- Building reinstatement-data persistence and retrieval in DynamoDB across ingestion, asynchronous SQS processing, and encrypted downstream callbacks, with JUnit and Mockito unit test coverage
- Implementing a configurable rule-engine exemption that, per business rules, skips document-discrepancy checks already cleared at original policy issuance for reinstatement cases, eliminating redundant re-verification

MPro Project

- Engineered a configuration-driven onboarding platform (Java, Spring Boot, AWS S3/CloudFront) spanning **12** retail products and group insurance, converting Excel-based business rules into JSON configuration and eliminating **3–4** database calls per policy
- Developed rate-limited integration APIs that expose premium and benefit calculations and generate benefit-illustration PDFs for fintech and aggregator partner platforms
- Designed secure policy retrieval APIs supporting lookup by policy number, PAN, or mobile number with DOB verification using Redis-based OTP authentication, prefilling **90%** of a 6-stage customer journey

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Core Java: OOP, Multithreading, Concurrency, Collections, Streams, Exception Handling

Frameworks: Spring Framework, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs (RESTful), Microservices, JWT, React

Databases & Messaging: SQL (MySQL), NoSQL (MongoDB, Redis), Apache Kafka

Cloud (AWS): EC2, S3, RDS, DynamoDB, SQS, API Gateway, CloudFront, CloudWatch, IAM, Parameter Store

Tools & Practices: Docker, Git, GitLab, Jenkins, Maven, JUnit, Mockito, Unit Testing, Postman, Swagger, SonarQube, Kibana, Dynatrace, Jira, Agile, CI/CD

PROJECTS

Guardian Life Assurance (Personal Project) | *Spring Boot, React, MySQL, Spring Security*

- Engineered a full-stack insurance management system using Spring Boot, React, and MySQL with JPA-based persistence, role-based access control, automated policy workflows, and analytics dashboards

EDUCATION

Anurag University

Bachelor of Technology in Artificial Intelligence, CGPA: 7.9

Nov 2020 – Jun 2024

Hyderabad, India
