KEY ACHIEVEMENTS

- Optimized a high-volume data-retrieval API, **reducing worst-case latency by 80% (15s to under 3s)** by eliminating full-collection scans through nested-document indexing and parallelizing external API calls asynchronously
- Resolved a production data mapping incident **affecting 3000+ policies**, restoring end-to-end data integrity
- Reduced production exceptions by **50%** under a Kaizen initiative and cleared **600+ SonarQube issues**
- Earned the **Excellence Award (FY25–26)** from Axis Max Life Insurance for outstanding performance on the MPro project

EXPERIENCE

Monocept

Nov 2024 – Present

Software Engineer | Client: Axis Max Life Insurance | Project: MPro

Hyderabad, India

- Built a **configuration-driven onboarding feature** (Spring Boot, Coherent Spark, AWS S3/CloudFront) for **12 insurance products**, migrating plan code assignment to plancode.json and **eliminating 3–4 database calls per policy**
- Migrated **group insurance (superannuation)** workflows to a configuration-driven model, enabling product setup without code changes
- Mapped proposal data between mSales (external application) and MPro across multiple products, ensuring data parity between source and target systems
- Extended wrapper APIs with Benefit Illustration support for fintech and insurance aggregator integrations
- Designed secure policy retrieval APIs supporting lookup by policy number, PAN, or mobile number with DOB verification using Redis-based OTP authentication, **prefilling 90% of a 6-stage customer journey**
- Owned production support, hotfix deployments, hypercare, CI/CD pipeline management, and production monitoring using GitLab, Jenkins, Kibana, and CloudWatch

Software Intern

May 2024 – Nov 2024

- Developed full-stack insurance modules using Spring Boot, React, MySQL, and Redis covering policy, customer, claims, and payment workflows
- Implemented JWT authentication, Spring Security, REST APIs, and optimized indexed MySQL queries to improve reporting performance

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Core Java: OOP, Multithreading, Concurrency, Collections, Streams, Exception Handling

Backend Technologies: Spring Boot, Spring Security, Microservices, REST APIs, Spring Data JPA, Hibernate, JWT

Databases: MySQL, MongoDB, Redis

Cloud & AWS: EC2, S3, RDS, CloudFront, CloudWatch, IAM, Parameter Store

Frontend: React

Developer Tools: Git, GitLab, Jenkins, Maven, Docker, Postman, Swagger, JUnit, Mockito, Kibana, Dynatrace, SonarQube, Jira

Practices: Agile, CI/CD

PROJECTS

Guardian Life Assurance | Spring Boot, React, MySQL, Spring Security

2024

- Engineered a full-stack insurance management system using Spring Boot, React, and MySQL with role-based access control, automated policy workflows, and dashboards for policy analytics and claim tracking

EDUCATION

Anurag University

Nov 2020 – Jun 2024

B.Tech in Artificial Intelligence, CGPA: 7.9

Hyderabad, India
