SUMMARY

Java Backend Developer with 2+ years of experience building insurance software using Java, Spring Boot and AWS. Work includes policy applications, search APIs, partner integrations and support for live systems. Experienced in improving API response times, fixing data issues and connecting backend services.

SELECTED ACHIEVEMENTS

- Reduced worst-case API response time from 15 seconds to under 3 seconds using MongoDB indexes and concurrent external API calls.
- Resolved a live data-mapping issue affecting 3,000+ insurance policies and restored data integrity.
- Contributed to a team initiative that reduced production exceptions by 50%; also resolved 600+ SonarQube code-quality findings.
- Received the Axis Max Life Insurance Excellence Award for FY25-26 and senior-leadership recognition for contributing to a 12-product modernization program that nearly halved new-product delivery timelines.

EXPERIENCE

Software Engineer | Monocept

Client: Axis Max Life Insurance

May 2024 - Present

Hyderabad, India

Dolphin - Policy reinstatement

- Integrating support for restoring lapsed policies across 8 Spring Boot services and 15 downstream callback APIs, while maintaining compatibility with existing integrations.
- Building case-data storage and retrieval with DynamoDB, background processing with Amazon SQS and encrypted callbacks; testing with JUnit and Mockito.
- Adding configurable rules to skip redundant document checks for reinstatement cases already validated when the original policy was issued.

MPro - Insurance product setup and policy applications

- Built configuration-based onboarding for 12 retail insurance products and group insurance using Java, Spring Boot, AWS S3 and CloudFront. Converted Excel business rules to JSON and removed 3-4 database calls per policy.
- Developed rate-limited partner APIs for premium and benefit calculations and automated PDF documents showing plan costs and benefits.
- Built policy-search APIs with date-of-birth verification and Redis-based OTP authentication, supporting automatic completion of 90% of a six-stage customer journey.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, microservices, JWT.

Java fundamentals: object-oriented programming, collections, streams, exception handling, multithreading and concurrency.

Data and messaging: SQL, MySQL, MongoDB, Redis, DynamoDB, Amazon SQS, Apache Kafka.

AWS: EC2, S3, RDS, API Gateway, CloudFront, CloudWatch, IAM, Parameter Store.

Development and quality: Git, GitLab, Jenkins, Maven, Docker, JUnit, Mockito, SonarQube, Postman, Swagger, Kibana, Dynatrace, Jira, Agile and CI/CD.

Additional: JavaScript, React, HTML and CSS.

PERSONAL PROJECT

Guardian Life Assurance

Spring Boot, React, MySQL, Spring Security

- Built a full-stack insurance management system with automated policy workflows, role-based access, JPA-based persistence and analytics dashboards. Code: github.com/valletivarish/guardian_life_assurance

EDUCATION

B.Tech in Artificial Intelligence | Anurag University, Hyderabad | CGPA: 7.9

Nov 2020 - Jun 2024
